Long ago, glaciers covered many places on the Earth. They shaped the land.
There are also glaciers at the top and bottom of the world. Glaciers, made of solid ice, move like a river.

Great lakes and left grooves in rocks. They dug deep valleys. They made the glaciers smooth and polished rocks.
Glaciers are made of ice. They are big and heavy. They can flow like a river.

Glaciers are also found in the Arctic and in Antarctica. Photo courtesy of Alaskan Dude, Flickr.
Now many of these glaciers are gone. But we can still see their sculptures all around us.

We see glaciers on mountains. They scrape and shape the sides of the mountains.
